

Control	Example 1	Example 2	Example 3	Example 4
Natural Control	The mountain range prevents the predator from crossing into the state	Extremely cold winter prevented insect damage this year	Contamination of the lake killed fish, including those that were predatory	A large river divides two properties and prevents the spread of weed species onto adjacent property
Chemical Control	Shock your swimming pool with chlorine	Use an insecticide to control bark beetle infestation in trees	Use Raid to kill black widow spiders in shed	Spray Roundup to control weeds along a sidewalk
Biological Control	Release ladybugs into your garden to control other pests	Plant flowers near a vineyard to attract beneficial insects	The city of Berkeley rents out goats to eat weeds along roadways	Use parasitic wasps to control scale
Genetic Control	Plant Bt corn, which produces a protein that kills caterpillars	Plant Roundup-Ready cotton	Transfer genetic material from one insect-destroying microorganism to hybrid seed	Select cattle that are resistant to disease or parasites in your area
Regulatory Control	The mosquito abatement officials drain or treat standing water that provides breeding sites for mosquitoes	The port authority monitors the airport to prevent the entry of pests from other states and/or countries	The forestry department has a program to destroy weeds and thin the forest to reduce fire hazards	State quarantine is set to prevent a citrus pest from entering Arizona
Mechanical/Physical Control	Put out mouse traps	Seal cracks and crevices to exclude insects	Plow a field to control weeds	Put up cloth mesh to exclude birds from fruit trees
Cultural Control	Close a garbage container to eliminate food sources for flies, cockroaches and rodents	Remove debris from around a building to prevent fungal rot damage	Sterilize soil for disease control	Pulling or removing weeds before they produce seeds.
